Generics Exercise

In this code exercise, you will convert a regular class into a generic.

Steps

- Download Generics.zip from Resources unzip and add the project to your current solution
- All tests should succeed
- Review the code for the class ObjectArrayList .
- Change the name of the class to GenericArrayList
- Convert the class to a generic by lifting the object type from the class, replacing with a generic parameter
- Update the test class to utilize the generic
- Re-run tests
